Year 6
Webpage editing

Webpage	A single screen/page of information on a _website_.
Website	All the webpages and data contained within one domain.
Domain	The domain shows the category or geographical area that an internet address belongs to. e.g. .com .org or .co.uk
Hypertext	A way of digitally connecting pieces of text via links so that you can go quickly and directly from one to another.
Purpose	The purpose of something is the reason for which it is made or done.
Browser	A browser is a piece of computer software that you use to search for information on the internet.
Copyright	If someone has copyright on a piece of work, it is illegal to reproduce it without their permission.
Homepage	On a website, the home page is the main (often first) page of information which often contains links to other pages.
Navigation	Getting from one place (or page) to another by an efficient means.

Apps/ Software

|	
Chrome browser	Google Sites

Features of Websites

Webpages are made up of a code called Hypertext Markup Language (HTML). You can find this by right-clicking on a page and selecting 'Inspect.'

The menus at the top of the page allow you to look at different parts of the website.

There are links to other areas of the website/ World Wide Web (in blue).

Navigating a Website

Navigation Pathways are also known as breadcrumb trails.

Hyperlinks allow different pages to be linked together by clicking on text or images.

These links help the audience to navigate the website easily.

The user can also keep track of where they have been on the website.

An effective website is easy to navigate because of how it is designed.
